Plasticity and Regeneration of the Nervous System

By -

Springer. Paperback. Book Condition: New. Paperback. 365 pages. Dimensions: 9.6in. x 6.7in. x 0.9in. One of the most impressive advances in the field of neuroscience over the last decade has been the accumulation of data on plasticity and regeneration in the nervous system of mammals. The book represents the contribution of a group of neuroscientists to this rapidly expanding field, through a Conference organized by the Institute of Developmental Neuroscience and Aging (IDNA). The meeting was held in Torino, Italy during April 1990 in honor of a great pioneer in the field of Neuroembryology, Professor Guido Filogamo. His introduction of the concept of neuroplasticity has had a significant impact on the study of neurobiology. This volume is divided into six sections, each focusing on one of the subject areas covered during the meeting: Molecular and Cellular Aspects of Central and Peripheral Nervous System Development; Hormones, Growth Factors, Neurotransmitters, Xenobiotics and Development; In Vivo and in Vitro models of Development; Development and Regulation of Glia; Regeneration; and Aging. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
